SOCIAL ENTERTAINMENT, REIMAGINED

Where connection comes alive.

Live experiences. Lasting communities.
One connected creator ecosystem.

- Development-stage product

Open to investor conversations ↗

Actual Flutter app screens · Demo content shown throughout this overview.

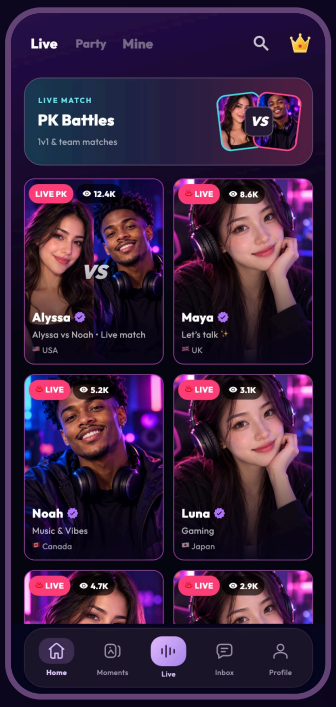

01 / THE PRODUCT

A social home for participation.

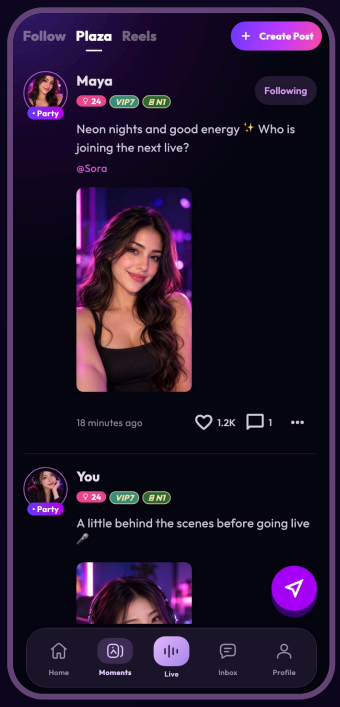

Rina brings discovery, live entertainment and ongoing community into one mobile experience.

THE PRODUCT THESIS

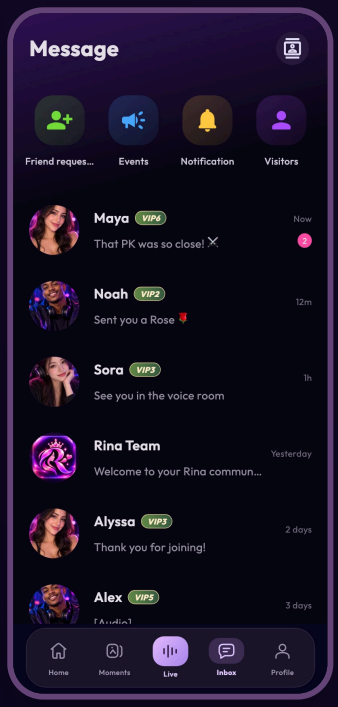

Help creators turn a first interaction into a lasting community — through live rooms, shared content and everyday conversation.

Discover

Share

Stay connected

Creators

Host rooms, publish Moments and Reels, receive virtual gifts, and build a recognizable presence.

Communities

Discover creators, join voice rooms, make friends, chat privately and play casual games.

Agencies

Recruit hosts, manage roles, set targets and coordinate creator operations in one place.

This product thesis still needs validation through launch cohorts, measured retention and sustainable unit economics. Screenshot activity is illustrative demo content.

02 / BUILT FOUNDATION

Implemented. Connected. In development.

The core Flutter app and authenticated backend already cover these product journeys.

IMPLEMENTED

Built in the development codebase. This status does not imply public launch, production reliability or completed third-party verification.

01 / CONNECT ✓

Live video & voice rooms

Room creation, admission, roles, speaker seats, invitations, audience controls and presence.

02 / CREATE ✓

Video & voice PK battles

1v1 and team invitations, accept or reject, shared-room participation, gift scoring and host controls.

03 / CREATE ✓

Moments & Reels

Photo albums, video and text posts, tags, location, privacy, likes, comments and creator discovery.

04 / CONNECT ✓

Friends & private messaging

Follow and friend requests, direct conversations, attachments, read markers and recipient-controlled privacy.

05 / CONNECT ✓

Groups & community

Private membership, durable group conversations, invitations and role-based group management.

06 / EARN ✓

Virtual gifts & effects

Multi-recipient gifts, animated celebrations, gift ownership and creator gift showcases.

07 / EARN ✓

Wallet & transaction ledger

Server-managed balances, transaction history, protected spending and retry-safe wallet operations.

08 / EARN ✓

VIP, Noble & virtual store

Server-priced memberships, expiring entitlements, avatar frames, owned items and equipment.

PRODUCT FOUNDATION

Flutter mobile app → **Fastify / Node.js** authenticated API → **PostgreSQL** data & ledger

03 / CREATOR OPERATIONS

More than a live experience.

Creator tools, community operations and account controls extend the connected product foundation.

IMPLEMENTED

Server-managed operations and product interfaces are present. Relevant provider and deployment dependencies are listed on the following page.

09 / GROW ✓

Agency & host management

Applications, invitations, team roles, host targets, announcements, agency Moments and staff review.

10 / GROW ✓

Business development tools

Scoped agency workflows, source approvals, transfers and audited platform review.

11 / GROW ✓

Rankings, levels & daily tasks

Derived rankings, verified activity, XP claims, progression, badges and event registrations.

12 / CREATE ✓

Party & room studio

Funded coin envelopes, unclaimed refunds and free spotlight draws. Broadcast music and voice effects depend on live media setup.

13 / CONNECT ✓

Play lounge

Solo Ludo against a labeled bot, Memory Garden, Quick Quiz and Glow Rush. No cash wagers or coin rewards.

14 / CREATE ✓

Profiles & Rina Card

Editable profiles, social connections, gift showcases and a personalized card with native image sharing.

15 / CONNECT ✓

Account safety & moderation

Secure sessions, privacy preferences, blocking, reports, support tickets, moderation roles and audit records.

Current rooms and chat use foreground HTTP polling. Room music and voice effects depend on configured live media. Virtual balances and game activity do not represent production cash payouts.

04 / LAUNCH READINESS

A clear view of what remains.

The next work is specific: verify external providers, prepare production operations and complete the remaining infrastructure.

INTEGRATION READY

Implemented adapters · Verification required

Live audio & video transport

Agora SDK, account-bound tokens and renewal are integrated. Provider configuration and two-device verification remain.

Stripe sandbox checkout

Test-only checkout and signed webhooks are implemented. Account configuration and a provider-backed purchase still need verification.

PLANNED

Not completed for production launch

01 **Public launch infrastructure**

Production HTTPS hosting, database backups, storage, email delivery, monitoring and final policies require deployment and validation.

02 **Live payments & creator payouts**

Real-money charges, bank withdrawals, settlement and production reconciliation remain disabled pending implementation and review.

03 **Background push notifications**

FCM and APNs delivery for messages, invitations and reminders beyond the active app.

04 **Video processing pipeline**

Transcoding, generated thumbnails, codec and duration validation, and production media processing.

05 **Realtime delivery at scale**

Move beyond current foreground HTTP polling as concurrency and operational needs grow.

Current boundary: live payments and actual bank/creator payouts are disabled. Public launch requires account-backed provider checks, reliable infrastructure and finalized operating policies.

05 / THE OPPORTUNITY

A creator-led business model.

Proposed revenue channels build on the gifting, membership and virtual store experiences already represented in the product.

Virtual gifting

In-app virtual gifts and audience participation around creators and shared experiences.

Memberships

VIP and Noble entitlements, identity features and membership benefits.

Virtual goods

Store purchases such as avatar frames, equipment and other digital items.

These are proposed revenue channels, not revenue claims. Live monetization and payout settlement remain disabled pending enablement and review.

PROPOSED USE OF CAPITAL

Fund the path to a validated launch.

01 **Product & provider validation**

Verify two-device live media, provider authentication, email delivery and a signed sandbox payment.

02 **Infrastructure & media**

Production hosting, storage, database backups, monitoring, push delivery and video processing.

03 **Trust, safety & operations**

Finalize policies and moderation processes; strengthen support and payment operations readiness.

04 **Creator & agency activation**

Validate onboarding, test focused launch communities and measure retention and monetization behavior.

Funding terms: open for discussion.

Funding amount, valuation, allocation and terms are to be discussed with the founder. This overview documents the product and roadmap; traction, revenue and market data are not included.

06 / THE NEXT CHAPTER

Milestones, then momentum.

A proposed sequence from a connected development product to a validated public launch.

FOUNDATION — Implemented

Build the connected experience

A Flutter app and authenticated backend spanning live rooms, social content, gifting, community and creator operations.

02 — VALIDATION — Next milestone

Prove the complete journey

Verify live audio and video on physical devices, configure provider accounts, and complete a signed sandbox purchase.

03 — LAUNCH READINESS — Planned

Prepare for a reliable launch

Deploy production infrastructure, strengthen media delivery, add push notifications and finalize operating policies.

04 — GROWTH — Planned

Activate the creator ecosystem

Validate launch communities and agency onboarding, then expand with measured engagement and sustainable economics.

Milestones describe intended direction. Timing and scope depend on resources, provider verification and operating readiness; no launch dates are promised.

LET'S BUILD THE NEXT CHAPTER

Bring the world a little closer.
